**EVALUATION SCORE SHEET**

**Items** | **Points** | **Possible** | **Earned**
--- | --- | --- | ---
Proper circuitry, wire colors, screw colors | 12 | | 
Proper stripping of conductors and cable jackets | 5 | | 
Proper connection of conductors | 5 | | 
Safe work habits | 3 | | 
**Total** | 25 | | 

**INSTRUCTIONS:**

You will have 15 minutes to do this exercise. Ask for assistance if you’re not sure what you are doing. Connect a receptacle-type ground-fault circuit interrupter (GFCI) so that loads plugged into the GFCI are protected, and so that other receptacles on the same branch circuit are also protected. Use proper wiring procedures and safe work habits. Conductors may be wrapped around screws, or inserted in quick-attach holes, where available.
